

Product Code . SEL-EELE-11146

Pulse Position Modulation & Demodulation

Description

Pulse Position Modulation & Demodulation

This training board one can know the specialized techniques of Pulse Position Modulation and Demodulation. Practical experience on this board carries great educative value for Science and Engineering Students.

Features:-

The board consists of the following built in parts:

- Pulse Position Modulating circuit based on IC.
- Demodulating circuitry based on an IC and transistors.
- $\pm 6V$ D.C. at 100mA, IC regulated Power Supply internally connected.
- Pulse Train (Carrier) Generator based on timer IC.

- 50 Hz A.C. sinusoidal modulating signal obtained from stepped down transformer.
- Adequate no. of other electronic components.
- Mains ON/OFF switch, Fuse and Jewel light.
- The unit is operative on 230V $\pm 10\%$ at 50Hz A.C. Mains.
- Adequate no. of patch cords stackable from rear both ends 2mm spring loaded plug length $\frac{1}{2}$ metre.
- Good Quality, reliable terminal/sockets are provided at appropriate places on panel for connections/observation of waveforms.
- Strongly supported by detailed Operating Instructions, giving details of Object, Theory, Design procedures, Report Suggestions and Book References.

We are leading manufacturers, suppliers of Pulse Position Modulation & Demodulation for Electronics Engineering Lab Equipments. Contact us to get high quality Pulse Position Modulation & Demodulation for Electronics Engineering Lab Equipments for schools, colleges, universities, research labs, laboratories and various industries.
