

Product Code . SEL-EELE-11241

Whirling Of Shaft Apparatus

Description

Whirling Of Shaft Apparatus

The speed at which resonance occurs is known as critical speeds. These speeds are also called whirling speeds or whipping. Whirling Of Shaft Apparatus When the natural frequency of a system coincides with the external forcing system frequency the phenomenon is called resonance.

Utilities Required:-

- A dimmer state of 240v, 2amp, and 50 cycles is used to control speed of the rotating shaft.
- The driving motor is 230V DC 1/16 H.P; 6500 RPM.

We are leading manufacturers, suppliers of Whirling Of Shaft Apparatus for Electronics Engineering Lab Equipments. Contact us to get high quality Whirling Of Shaft Apparatus for Electronics Engineering Lab Equipments for schools, colleges, universities, research labs, laboratories and various industries.
