

Product Code . SEL-EELE-11276

Chemical Reactor Training Equipment

Description

Chemical Reactor Training Equipment

The properties of different chemical reactors can be investigated by performing a specification reaction using this trainer. Their influence on the conversion of reactants is observed in the respective reactor. Two variable speed diaphragm pumps pump the reactants through the reactor. Reactant conversion and reaction temperature are measured with a combined conductivity and temperature measuring unit. It is also possible to use PC data acquisition. The resulting reaction product is collected in a stainless steel tray in the unit. The reaction is moderated using a controlled hot water circuit.

The reactors are available as accessories.

We are leading manufacturers, suppliers of Chemical Reactor Training Equipment for Electronics Engineering Lab Equipments. Contact us to get high quality Chemical Reactor Training Equipment for Electronics Engineering Lab Equipments for schools, colleges, universities, research labs, laboratories and various industries.
