

Product Code . SEL-EELE-11250

Single Cylinder Four Stroke Diesel Engine Test Rig

Description

Single Cylinder Four Stroke Diesel Engine Test Rig

They are classified according to cycle, number of cylinders, arrangement of cylinders, fuel used, type of ignition, valve arrangement, cooling system. Test rigs are used to find out the performance of an IC engine. It consists of an IC Engine, dynamometer, fuel measuring, air intake measuring and various other arrangements.

Experiments:-

- To determine Brake Thermal Efficiency.
- To determine volumetric efficiency measurement.
- To determine specific fuel consumption.
- To determine Brake Horse Power.

We are leading manufacturers, suppliers of Single Cylinder Four Stroke Diesel Engine Test Rig for Electronics Engineering Lab Equipments. Contact us to get high quality Single Cylinder Four Stroke

Diesel Engine Test Rig for Electronics Engineering Lab Equipments for schools, colleges, universities, research labs, laboratories and various industries.
